This Software is designed to Enable and Disable the use of PC with the help of Coin Acceptor. It has the following features:

- By integrating a Coin Acceptor to the PC, the Software will enable or disable the use of PC
- After the Software is installed, and from next restart onwards, the Software executes itself automatically and notifies its presence with an icon in the right corner of the taskbar.
- It will enable the PC, whenever a coin enters the Coin Acceptor
- As soon as a user puts a coin in the Coin Acceptor, it enables the PC and lets the PC to be used for the duration fixed by the owner for the particular amount put in the Coin Acceptor. The user will have the option to use the PC either Online (with Internet) or Offline
- If a malicious user tries to use the PC without putting coin in the Coin Acceptor, it will stop all the application opened automatically, and will not let the user proceed.
- While a valid user is using the PC, the Software will inform the user about the time left in a continuous and countdown manner, so that the user can keep track of time left for his/her duration
- As countdown timer reaches 10 mnts less than the allotted duration, the software will inform the user about, 10mnts left for use. And here the user has the option to put some coin in the Coin Acceptor and can increase the time of use.
- As the countdown timer reaches the end of the duration allotted, it again informs the user and saves all the editable applications in a folder and closes all the applications.
- The owner of the system has the option to do administration work with the help of a valid password after double clicking the icon displayed in the taskbar
- The Valid administrator or owner.
 - can change the time duration for the amount of coin accepted by the Coin Acceptor for both Online and Offline use.
 - can change the password for administration.
 - can have a look on the usage log file. This file helps the owner to keep track of
 - ✓ Number of times PC was used on a particular Date
 - ✓ Amount collected by the coin acceptor on a particular date
 - ✓ Duration Used for a particular date and Amount as well
 - ✓ Delete the old records, which are nor required
 - After finishing the admin work the administrator can come out of the admin mode without interrupting the software's continuous execution.
- At the time of PC shutdown, the software closes itself automatically.

One of the most important and interesting feature is, that, the Arbokiosk can be modified according to the need of the buyer. It can be further customized as required.
